*SAFEBASE™ LIGHTFOOT™ STABILIZERS*

## CRAWLSPACE STABILIZATION IN ROMULUS, MI

Rapid-Dri Foundation Systems was contacted by a homeowner with concerns of sagging floors. A plan was made to stabilize the floors with SafeBase™ Crawl Space Stabilizers with LightFoot™ Footings. The footings were quickly installed beneath the center beam and injected with polyurethane, filling any voids between the base and the soil. The stabilizers were then tightened to lift the beam and level the floor. A total of three stabilizers were installed, and the job was completed in less than one day.

With the SafeBase™ Crawl Space Stabilizers and LightFoot™ Footings installed, the homes floor will be level and stabilized for years to come!
